

COLLAPSIBLE CHAIR WITH ADJUSTABLE BACKREST

ABSTRACT OF THE DISCLOSURE

A chair includes a support assembly comprised of a first leg set having two space first leg bars and a second leg set having two space second leg bars that are located between and pivoted to the first leg bars. A backrest has lower ends pivoted to the second leg bars and is thus rotatable with respect to the support assembly to selectively change a tilting angle of the backrest with respect to the support assembly. A tubular slide is movably fit over a free end of each first leg bar and is pivoted to the backrest. The tubular slide has a fastening device to selectively secure the tubular slide with respect to the first leg bar thereby releasably securing the backrest with respect to the support assembly.
